# Create an origami phone stand
Follow along with step-by-step video
instructions at **go.ncsu.edu/phone-stand**

**1** Flip paper over to the side with no wolf head. Fold down the center line.

2 Bring bottom left and right corners to center line, then unfold.

**3** Fold top left and right corners to center line.

**4** Keeping top corners folded, bring bottom left and right corners up to the red line.

**5** Unfold both top corners; bring bottom corners up into the fold.

Turn the whole paper over.

6 On left and right sides, fold along lines shown below, starting where lines intersect and moving upward.
Unfold those two sides.

**7** Fold bottom corners up to meet the same center point.

Your page should look like this.

8 Turn paper over. Fold bottom tip up to the line shown below.
Fold in half along the first crease you made, then unfold.
9 Bring top left and right corners down.

Place right side over left, and tuck the right bottom tip into the bottom left corner.

10 The horizontal creases of the two sides should be aligned, each side tucked into the opposite corner.
11 Flip the whole paper upside down, pressing the two aligned edges upward, creating a tip.

Fold everything beyond the aligned edges down and tuck inside.

12 Flip so the point is up, and sharpen the creases. You can place the phone on the stand vertically or horizontally.

Make your own origami phone stand!
